

DUPPY SENSI GENETICS

CANNABIS GENETICS DATASHEET

SEEDS STRAINS FOR MEDICAL PURPOSES

CANNABIS GENETICS DATASHEET

Duppy Sensi is pleased to present a line of cannabis seeds with exceptional characteristics, particularly suitable for medical purposes thanks to the presence of abundant and multiple terpenes and cannabinoids.

OVERVIEW AND GENETICS DETAILS

Strain Name	Orange Bud S12
Seed Type	Feminized
Indica/Sativa	Dominance Sativa
Flowering Type	Photoperiodic
Grow Environment	Indoor - Outdoor
Indoor Height	Medium High
Flowering Time	50/60 Days
THC Level	15-18%
Smell and Taste	Orange, Citrus, Skunk
Package Format	3 Seeds per pack Euro 30,00 – USD 33,00

DESCRIPTION

Orange Bud is one of the original varieties of the Skunk family. This strain was discovered during a careful study of all Skunk strains, which began in the early 1980s. Duppy Sensi isolated a two specific phenotypes that could give life to seeds capable of generating the best terpene and sensory expression in the plant.

Orange Bud is a plant that produces superior quality buds. Even novice growers will find Orange Bud seeds easy and enjoyable to grow. It is no coincidence that this strain produces hardy, dense flowers covered in crystals and beautiful orange hairs.

Orange Bud produces large yields of high quality cannabis; on average from 400 to 500 grams per square meter. If you use the SOG technique to perfection you can also achieve something more.

This plant will be able to express predominantly a single phenotype, albeit with some minimal variation in termenic terms.

It incorporates two terpene tendencies. One with primary notes of citrus and orange peel with a delicate minty aftertaste.

A sensory journey between new and ancient flavors expertly sealed in this fantastic Orange Bud genetics.

OVERVIEW AND GENETICS DETAILS

Strain Name	White Widow S10 OUT OF STOCK
Seed Type	Feminized
Indica/Sativa	Predominance Sativa
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	50/60 Days
THC Level	15-20%
Smell and Taste	Earthy, Floral, Fruity, Spicy, Sweet
Package Format	3 Seeds per pack Euro 30,00 – USD 33,00

DESCRIPTION

Stunning production characterizes her, White Widow is a sativa-dominant hybrid with powerful energizing effects. It was first produced in the 1990s as a cross between a Brazilian indica and a sativa variety native to South India.

Created specifically for a high number of trichomes, White Widow is particularly popular in hash production. This strain has an average THC composition of 20%, with some phenotypes exceeding that amount.

White Widow buds are large and somewhat tapered and tapered.

The structure of the flower buds is more sativa than indica, with a soft, fluffy texture that can be broken a little easily despite its stickiness.

The leaves are spring green with few visible pistils.

An excellent plant that lends itself very well to all types of crops, resistant to temperatures and molds.

Duppy Sensi has isolated the best phenotypes in search of the ancient flavors of the past and sealing them in its seeds.

OVERVIEW AND GENETICS DETAILS

Strain Name	Mango Sapphire S2 OUT OF STOCK
Seed Type	Feminized
Indica/Sativa	Predominance Indica
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	50/55 Days
THC Level	22-25%
Smell and Taste	Mango, Flora, Sweet
Package Format	3 Seeds per pack Euro 33,00 – USD 36,00

DESCRIPTION

Mango Sapphire is a perfect indica-dominant cross with Bubba's Gift, OG Kush with an introduction of Afghani genetics.

The dense buds blend incomparably with her white trichomes and orange pistils.

Structurally it is bushy and is particularly suitable for SOG cultivation.

Mango Sapphire has a fruity flavor in the aroma with notes of exotic fruits such as coconut, mango and citrus with a delicate but intense aroma.

These S1 seeds come from a particular phenotype with surprising olfactory, organoleptic and medical characteristics. Particularly suitable for relieving anxiety and to help sleep.

OVERVIEW AND GENETICS DETAILS

Strain Name	Gorilla Breath S4
Seed Type	Feminized
Indica/Sativa	Predominance Indica
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	55/65 Days
THC Level	22-27%
Smell and Taste	Citrus, Exotic Fruit, Gas. Spicy
Package Format	3 Seeds per pack Euro 33,00 – USD 36,00

DESCRIPTION

Gorilla Breath an extreme power. A perfect cross between fine Indica and Sativa strains, I give this strain a unique indica dominance.

Excellent for indoor and outdoor cultivation, topping is recommended, this will greatly increase its yield.

In its flowers it contains important essences of exotic fruit, earth, spices and petrol and its effect is overwhelming and lasting.

Excellent for relieving insomnia and nervous states in general, always maintaining a precise focus.

OVERVIEW AND GENETICS DETAILS

Strain Name	Watermelon Zkittlez S5
Seed Type	Feminized
Indica/Sativa	50/50% Indica - Sativa
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	65/75 Days
THC Level	25-31%
Smell and Taste	Floral, Fruity, Skittlez
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Watermelon Zkittlez, a resin and terpenes bomb. Watermelon Zkittlez is a cross between Watermelon Zum Zum Zum # 3 x OG Eddy, producing vigorous and slender Sativa dominant plants. It responds well to pruning and trimming, offering good results using SCROG and super-growing techniques to limit its vertical development and maximize flower production.

Duppy Sensi isolated a specific phenotype that could give life to seeds capable of generating the best terpene and sensory expression in the plant.

While her Sativa character is also reflected in the Watermelon Zkittlez effect, the harvest is ready after around 8 to 9 weeks of flowering in indoor cannabis cultivation and ready during October when grown outdoors.

It produces dense buds covered with an impressive layer of resin, surprising the grower with its quality. It is a delight for resin concentrate lovers due to its quantity and richness of terpenes.

Watermelon Skittlez produces a strong sweet and fruity aroma, with a predominance of watermelon and enriched with floral notes. It produces a cheerful, fun, energizing and motivating effect that promotes good mood.

OVERVIEW AND GENETICS DETAILS

Strain Name	Wedding Cake X Watermelon Zkittlez S6
Seed Type	Feminized
Indica/Sativa	50/50% Indica - Sativa
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	65/75 Days
THC Level	28-35%
Smell and Taste	Floral, Fruity, Skittlez, Spicy, Cream.
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

This cross between Wedding Cake and Watermelon Zkittlez produces Sativa dominant plants that with high resin and terpenes production.

Duppy Sensi isolated a specific phenotype that could give life to seeds capable of generating the best terpene and sensory expression in the plant, and THC peaks up to 35%.

This strain responds well to pruning, trellising and SCROG cultivation, with a medium to high yield, it is characterized by crop quality and a generous and aromatic concentrated cannabis production.

Wedding Cake x Watermelon is ready after around 9 to 10 weeks of flowering when grown indoors. Grown outdoors, with the harvest ready in October, it is advisable to grow it in a greenhouse to protect its compact flowers from humidity.

Its aroma combines sweet, fruity and floral notes on an earthy and spicy background. It produces a balanced effect, relaxed on the body and joyful and euphoric on the mental level.

OVERVIEW AND GENETICS DETAILS

Strain Name	Dosidos X Watermelon Zkittlez S5
Seed Type	Feminized
Indica/Sativa	50/50% Indica - Sativa
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	65/75 Days
THC Level	25-30%
Smell and Taste	Floral, Fruity, Skittlez, Spicy, Cream.
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

This strain is a cross between of : on the one hand Do Si Dos, an OGKB Girl Scout Cookies x Face Off OG hybrid bx1 that has inherited GSC's dense flowers and sweet aroma and flavor. OG Kush family power.

Duppy Sensi isolated a specific phenotype that could give life to seeds capable of generating the best terpene and sensory expression in the plant.

It is a 50/50 Indica-Sativa strain that responds well to pruning and trellising to maximize yield. The flowers will be ripe after about 60 to 75 days of flowering, with a generous yield of up to 500-550g per m2 in indoor gardening and up to 800g per plant grown outdoors with harvest ready in October.

Dosidos x Watermelon Zkittlez, a sweet and fruity aroma.

Once harvested, dried and cured, this strain will express its full potential. Its fleshy and dense flowers whitened by an impressive layer of resin, emanate a complex aroma that mixes floral, fruity and sweet notes against an earthy and spicy background.

It produces a balanced and relaxing effect, elevates the mood without getting nervous and fighting stress without being boring.

OVERVIEW AND GENETICS DETAILS

Strain Name	Moroccan Landrace
Seed Type	Regular
Indica/Sativa	Sativa 100%
Flowering Type	Photoperiodic - Autoflowering
Grow Environment	Indoor – Outdoor
Indoor Height	Medium High
Flowering Time	45/60 Days
THC Level	6-15%
Smell and Taste	Earthy, Spicy, Mentholated, Brown sugar and Cognac.
Package Format	12 Seeds per pack Euro 40,00 – USD 50,00

DESCRIPTION

This ancient strain has been cultivated in Morocco since the 14th century, handed down from family to family.

Its cultivation was established in the RIF mountain ranges, more precisely in the province of Ketama where the temperature range between night and day guarantees an ideal microclimate for this plant, capable of producing high quantities of resin.

The plant is of medium size if well cultivated, slender stem and not too long branches, ideal for cultivation in the open field. The strain is one of the most suitable for the production of Hashish, giving the product a unique flavor.

Outdoors and due to its semi-autoflowering tendencies, it is recommended to start them in large pots to maximize their growth before the flowering stage, and to increase the ratio of females.

Growing it indoors is not very easy, as the genotype is very well adapted to the outdoor climates found in the RIF, but for an experienced grower it will not be a problem to breed this plant and reap the best benefits.

Its resin encompasses multiple flavors ranging from earthy, spicy, mentholated, brown sugar and cognac.

The effect is mentally powerful, almost overwhelming with a very relaxing physical repercussion if the resin is allowed to mature properly.

A plant for experts and connoisseurs who love the ancient flavors of the past.

OVERVIEW AND GENETICS DETAILS

Strain Name	Gelato #33 S5
Seed Type	Feminized
Indica/Sativa	Predominance Indica
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	25-30%
Smell and Taste	Cream, Exotic Fruit, Spicy, Garlic
Package Format	3 Seeds per pack Euro 60,00 – USD 65,00

DESCRIPTION

Gelato # 33 bred by Duppy Sensi derives from a particular phenotype with particular characteristics. Its origin is definitely California, it is a cross between Sunset Sherbet x Thin Mint Cookies, however I don't know exactly the original breeder. After 6 Generations.

I have isolated the most complete phenotype for terpene aspect and THC Potency.

Its terpene profile ranges from exotic fruit, cream, garlic and spices. Its effect is uplifting, cerebral and very stimulating, it triggers the chat and the desire to do, physically very relaxing.

In cultivation it gives its best if topped, and grown on large pots capable of containing the enormous volume of roots.

Its yield is quite moderate, but the flowers have a dark green appearance with purple tendencies and covered with a thick layer of very sticky resin.

This Gelato # 33 S1 is the maximum expression of its species enclosed in 2 wellstabilized phenotypes.

OVERVIEW AND GENETICS DETAILS

Strain Name	Gas Pine S1
Seed Type	Feminized
Indica/Sativa	50%/50%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	20-25%
Smell and Taste	Gas, Pine, Fruit,
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Gas Pine is a cross from a mother of White Widow and a father of Dosidos X Watermelon Skittlez.

The breeding aimed to obtain a flower that could contain the main essences of both strains. The plant has a robust structure of medium size, medium-close internodes not too much foliage and rather compact flowers.

It is a rather easy plant to grow, very robust, it resists well even outdoors, does not like humid environments at all and tolerates below average temperatures very well, obviously it gives its best if grown in a favorable environment.

Topping is recommended indoors, as the plant's tendency is to stretch enough during the stretching phase.

It can acquire purplish colors in some climatic conditions, even the flowers are. The quality of the resin is superior, it gives off fragrances of gas and fruit with pine aftertaste.

Flowering times are about 55/65 days but it can depend on the phenotype, which can be as simple as 70 days.

The effect is complex, physical at the right point, it allows you to relax while maintaining an excellent level of mental focus lasting over time.

OVERVIEW AND GENETICS DETAILS

Strain Name	Sambuca S1
Seed Type	Feminized
Indica/Sativa	50%/50%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	18-25%
Smell and Taste	Anice, Lemon, Fruit, Sherbert
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Proud to present you one of my most successful latest works.

Sambuca S1 is a spectacular and original cross.

Mother Gelato # 33, father is Mimosa, both of the best phenotypes in my arsenal.

Structurally, the plant has a compact shape with balanced internodal distance, 3/8 cm, very resistant branches and moderate foliation, it does not tend to rise much even in the stretch phase.

An amazing result has been achieved in terms of cannabinoid content with high Delta 9 content and flavorings, unfortunately I do not yet have access to the analysis of terpenes but I can give you a description myself.

The main aroma that immediately reaches the nose is a marked smell of Anise, followed by notes of Lemon and Melissa and a slight final aroma of Sherbert.

OVERVIEW AND GENETICS DETAILS

Strain Name	Mellow Cake F1
Seed Type	Regular
Indica/Sativa	70%/30%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	60/70 Days
THC Level	20-22%
Smell and Taste	Marshmallow, Fruit, Gas
Package Format	12 Seeds per pack Euro 70,00 – USD 82,00

DESCRIPTION

Mellow Cake F1

Origin:

Mother: Wedding Cake x Watermelon Zkittlez S6

Father: Green Crack x Holy Grail I x OG Kush F3

Good stability results from the first generation.

Plants grow quite homogeneous with little structural variation.

Obviously the phenotypic characters can express themselves in many but not innumerable quantifications, so they can be particularly suitable for phenotype hunters but also for those who wish to cultivate something new.

The aromas are interesting, it retains the heaviness of Wedding Cake but incorporates a particular aroma and flavor from Marsh Mellow, sweet and delicate, a sweet above the cake!

OVERVIEW AND GENETICS DETAILS

Strain Name	Orange Duppy S1 OUT OF STOCK
Seed Type	Feminized
Indica/Sativa	50%/50%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	22-25%
Smell and Taste	Orange, Cake, Gas
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Unpublished Strain available in S1 version.

Mother: Orange Bud S12

Father: Wedding Cake x Watermelon Zkittlez S5

Definitely very vigorous plant, it can surprise for appetite, it feeds like a colossus.

Some phenotypes incorporate characteristics of both strains in terms of potency and concentration of terpenes.

The Orange Bud S12 base bred with care and love for several generations guarantees that marked and unmistakable smell of Sicilian orange and lemons.

The presence of genes from Wedding Cake x Watermelon Zkittlez updates the entire structure of the plant, giving it new effects and new flavors.

OVERVIEW AND GENETICS DETAILS

Strain Name	Mimosa S3
Seed Type	Feminized
Indica/Sativa	70%/30%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	27-33%
Smell and Taste	Orange, Lemon. Chamomile
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

A new concept of Mimosa.

Flavor of Candied Orange and scents of Chamomile.

Revamping of cannabinoid levels by selective phenotype hunting for pollination. Result is up to 33.70 Tthc.

The good balance between 70% Indica and 30% sativa gives the plant a rather slender structure, long branches with well spaced internodes, sometimes the weight of the buds puts a strain on the branches, it is good to use a scaffold.

It tolerates humid environments well and does not like excessive fertilization.

When consumed, it can be savored at the peak of its goodness at least after 40 days of tanning.

Its effect is clear, it immediately relaxes the body while keeping it energetic, activates the mind giving you euphoria.

OVERVIEW AND GENETICS DETAILS

Strain Name	Apple Fritter S2
Seed Type	Feminized
Indica/Sativa	70%/30%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	55/65 Days
THC Level	25-30%
Smell and Taste	Green Apple, Light Cheesy, Sour Gassy
Package Format	3 Seeds per pack Euro 60,00 – USD 63,00

DESCRIPTION

It was a complex job, divided between the search for seeds from an original Lumpy's Flowers cut and the selection of the best starting phenotype, but it was worth it.

Its structure is solid, with medium internodal distance, its production is not massive but guarantees a high quality of the flowers by incorporating a dense and rather dry resin and marked aromas of green apple.

Due to its indica dominance and terpene complex, it is particularly suitable for calming anxiety states and for helping sleep.

OVERVIEW AND GENETICS DETAILS

Strain Name	Duppy's Cookies S1
Seed Type	Feminized
Indica/Sativa	60%/40%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	70/80 Days
THC Level	27-30%
Smell and Taste	Butter Cookies, Fruit Cake, Gas
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Duppy's Cookies is a cross from a Cookies x Watermelon Skittlez S1 mother and Dosidos x Watermelon Skittlez father.

The result is a very vigorous plant in the vegetative phase, it does not require a lot of care and its feeding needs are not excessive.

It blooms rather slowly, but this gives the buds a unique density and powerful and penetrating aromas of butter, fruit tart and gas notes.

Its effect is direct, you will perceive body lightness and concentration that will lead you to a state of relaxation.

OVERVIEW AND GENETICS DETAILS

Strain Name	Lemon D S3 (MAC x SLH)
Seed Type	Feminized
Indica/Sativa	60%/40%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	50/60 Days
THC Level	22%
Smell and Taste	Butter, Spices, Lemon
Package Format	3 Seeds per pack Euro 36,00 – USD 39,00

DESCRIPTION

Lemon D S3 is a superlative crossbreed.

Generated from a careful selection to give a powerful aroma of almost macerated ripe lemon.

With the S3 version it was possible to better fix the powerful lemon aroma and the unmistakable Cali Cookies.

The seed returns a strong and solid plant with an average compact structure, excellent internodal distances for indoor cultivation and excellent resistance to moulds.

Its effect can be deceiving, at first impact it is energizing, then it becomes relaxing and gives moderate euphoria.

OVERVIEW AND GENETICS DETAILS

Strain Name	Pink COLA S1
Seed Type	Regular
Indica/Sativa	50%/50%
Flowering Type	Photoperiodic
Grow Environment	Indoor – Outdoor
Indoor Height	Medium
Flowering Time	60/65 Days
THC Level	27%
Smell and Taste	Spicy, Cognac, Naphtha
Package Format	12 Seeds per pack Euro 70,00 – USD 82,00

DESCRIPTION

Father: Do-si-DOS x Watermelon Zkittlez S5
Mother: Green Crack x Holy Grail x OG Kush F3

A stunning cross that gives the grower explosive flowers, dense resin and terpene loads, the main aromatic spectrum includes fruity aromas with spicy notes, aged cognac and naphtha.

Its effect is typical of hybrids with a high THC content, but I believe it is particularly suitable for combating pain, particularly joint pain.

At the moment the COAs are not available but they will be soon, but I can say with reasonable certainty that it may have around 25/27% t-thc.
